RETRO COLORS

Retro colors get a new life! The sun protection fabrics in the Retro Colors fabric collection are made of 100% polyester. The original red-orange colour from the retro palette is bold and makes a statement. The heavy, deep colours such as dark green or dark blue are surprising, but guarantee more tranquility in terms of appearance. The fabric is available in various different widths: 120, 250 and 320 cm. You can find the specific widths per fabric in this brochure's colour guide.

SEAMS

With awnings, the fabric is **stitched vertically**.

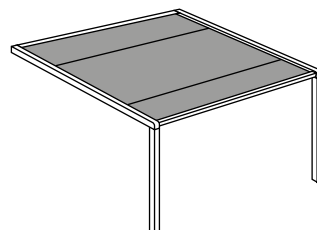

The fabric is manufactured in accordance with standard methods.

With canopy awning V642 – Tumba, the fabric is **welded horizontally**.

The weld seams are placed as high as possible towards the fabric tube in the sun protection fabric.

Please note: the position of the weld seams in the sun protection fabric depends on the projection and the fabric width.

FABRIC CHARACTERISTICS

The Retro Colors fabric collection is developed with the greatest of care, yet it's still possible for phenomena to occur in the sun protection fabric. Despite the best production and processing techniques, these phenomena are unavoidable and the value of the sun protection fabric remains unaffected. So what should you be thinking about exactly?

KINK FOLDS

When light fabric colours are used, pigment shifts can sometimes occur in the kinks when the fabrics are produced. Kink folds will look darker than the fabric when held up against the light.

CHALK STRIPES

Some light stripes can appear when processing the finished fabric, even with the absolute greatest care. These stripes are referred to as chalk stripes.

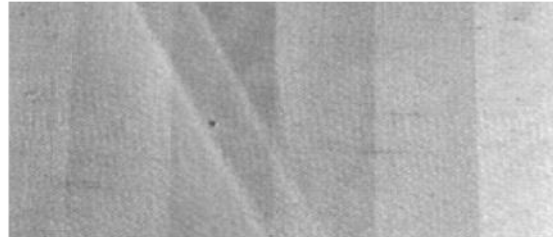

WAVES

Double layers of fabric can cause different thicknesses on the fabric roll near the seams and hems. These can result in fabric tensions and subsequent waves.

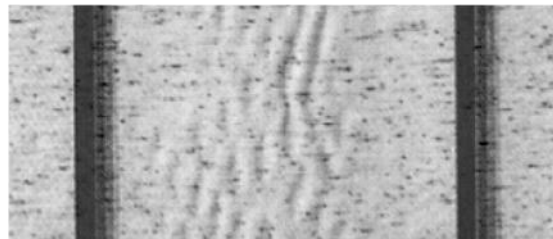

RAIN RESISTANCE

The polyester reflective fabric has been impregnated with an effective water-repellent and can withstand significant downpours (50mm per hour) at a minimum angle of 10°. The sun awnings will need to be rolled up during heavy and prolonged rainfall, in order to prevent any possible damage to the fabric and/or awning. Wet rolled up fabric will need to be rolled out to dry in good weather conditions as soon as possible. The V642 - Tumba conservatory awning also needs to be rolled up during snowfall.

CONSERVATORY AWNING

The V642 - Tumba conservatory awning can be used on a patio roof and freestanding on posts. The Tumba is equipped with a reflective, water-repellent and weather-resistant 100% high-tech polyester uni fabric with a zip in the side guides. The uni fabric results in less wear and tear, stable fabric tension and a small cassette. The water drainage is fully integrated.
